## Catalog Number of KHK Stock Gears

The Catalog Number for KHK stock gears is based on the simple formula listed below.

Please order KHK gears by specifying the Catalog Numbers.

(Example)

### Miter Gears

#### Material

S	S45C
M	SCM415
SU	SUS303
L	SMF5040
P	MC901
D	Duracon(M90-44)

#### Type

M	Miter Gears
MS	Spiral Miter Gears
MSG	Ground Spiral Miter Gears
AM	Angular Miter Gears

# 6

# Miter Gears

# Miter Gears

## Wide Variety from High Precision to Commercial Grades!

### Characteristics

Miter gears are a special class of bevel gears where the shafts intersect at 90° and the gear ratio is 1:1. KHK stock miter gears are available in two types, spiral and straight tooth, with high precision grade for demanding torques and speeds, and commercial grade for economical applications.

#### Main Features of Stock Miter Gears Offered

The following table lists the main features for easy selection.

Type	Catalog No.	Module	No. of teeth ( ) denotes shafts angle	Material	Heat treatment	Tooth surface finish	Precision JS B1704	Secondary Operations	Features
Spiral Miter Gears	MMSG	2~4	20, 25, 30	SCM415	Carburizing <small>NOTE 3</small>	Ground	2	△	High strength, abrasion-resistant and compact for high speed & torque use.
	SMSG	2~5	20, 25, 30	S45C	Gear teeth induction hardened	Ground	2	△	Reasonably priced ground gear, yet remachinable except for the gear teeth.
	MMSA(B) <small>NOTE 1</small>	1~10	20	SCM415	Overall Carburizing <small>NOTE 4</small>	Cut	4	×	Ready to use without performing secondary operations. Strong and abrasion resistant.
	MMS	2~5	20, 25	SCM415	Carburizing <small>NOTE 3</small>	Cut	4	△	Only teeth are induction hardened, allowing user to perform secondary operations elsewhere.
	SMS	1~8	20, 25, 30	S45C	Gear teeth induction hardened	Cut	4	△	Large numbers of teeth and modules are offered in these affordable spiral miter gears.
Straight Miter Gears	SMA(B)(C) <small>NOTE 1</small>	1~8	20, 25, 30	S45C	Gear teeth induction hardened	Cut	4	△	Usable without remachining, offered in 3 bore sizes.
	MM	2~5	20, 25	SCM415	Carburizing <small>NOTE 3</small>	Cut	4	△	Compared to SM miters, these are stronger and less abrasive, and allow secondary operations.
	LM <small>NOTE 2</small>	0.8~1.5	20	SMF5040 (Equiv. to S45C)	—	Sintered	5	○	Mass-produced, low cost sintered products. Small and light weight.
	SM	1~8	16, 20, 25, 30	S45C	—	Cut	3	○	Popular straight miter for many uses.
	SAM	1.5~3	20 (45°, 60°, 120°)	S45C	—	Cut	3	○	3 types are available for shafts at 45°, 60° and 120°.
	SUM	1~3	20, 25	SUS303	—	Cut	3	○	Suitable for food machinery due to SUS303's rust-resistant quality.
	PM	1~4	20, 25	MC901	—	Cut	4	○	MC nylon products are light and can be used without lubricant.
	DM	0.5~1.5	20	M90-44	—	Injection molded	8	△	Injection molded, mass-produced products, suitable for office machines.

**NOTE 1:** The letters "B" and "C" at the end of catalog numbers designate same items except for changes in the bore and keyway sizes.

**NOTE 2:** Sintered metal Miter Gears are manufactured by mixing powdered metal and pressing them in a mold under heat to fuse, sizing and impregnating with oil.

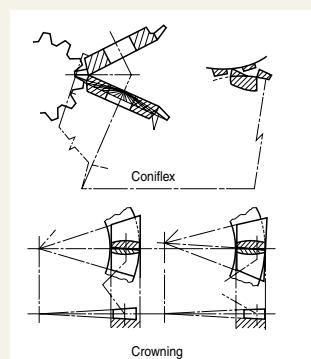

**NOTE 3:** Even though the bore and the hub portions are masked during the carburization and they can be modified, care should be exercised since the hardness is somewhat higher.

**NOTE 4:** MMSA(B) spiral miter gears are carburized throughout so that they do not permit any secondary operations. However, the back surface of B7 style gears is masked during the process so that it is possible to drill and pin on this surface.

KHK utilizes Gleason Coniflex No. 104, 102 and 114 bevel gear generating machinery and is well-equipped for mass production of straight miter gears. You can count on an economically priced, stable supply of straight miter gears from KHK.

○ Possible    △ Possible on some areas

× Not possible

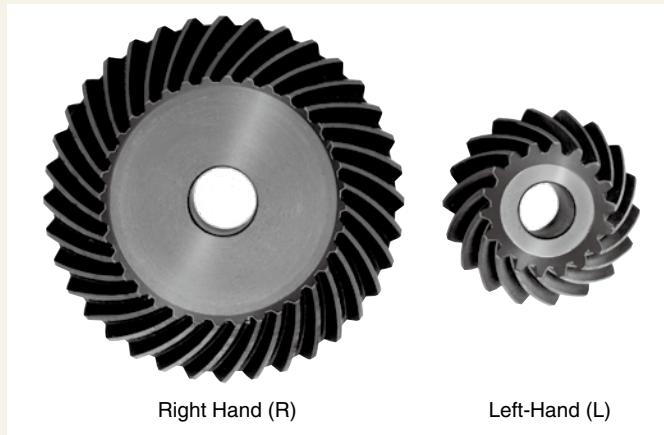

## Selection Hints

Please select the most suitable products by carefully considering the characteristics of items and contents of the product tables. It is also important to read all applicable "CAUTION" notes shown below before the final selection. Use of catalog numbers when ordering will simplify and expedite the processing of your order.

### 1. Caution in Selecting the Mating Gears

① Among KHK stock miter gears, there are products which are not interchangeable even when the module and the number of teeth are the same. Also, spiral miter gears require additional consideration since the right-hand mates with the left-hand spiral as shown in the table below.

#### ■ Spiral Miter (○ Allowable △ Allowable in certain cases × Not allowable)

Catalog No.& Spiral hand	MMSG (R)	SMSG (R)	MMSA(B) (R)	MMS (R)	SMS (R)
MMSG(L)	○	×	×	×	×
SMSG(L)	×	○	×	×	×
MMSA(B)-(L)	×	×	○	△	△
MMS(L)	×	×	△	○	△
SMS(L)	×	×	△	△	○

**CAUTION:** Spiral miter gears are paired to the items with the same catalog number except the last characters are "R" and "L". For selecting items in the "△" category, please reconfirm with your nearest KHK dealer that the pair can work.

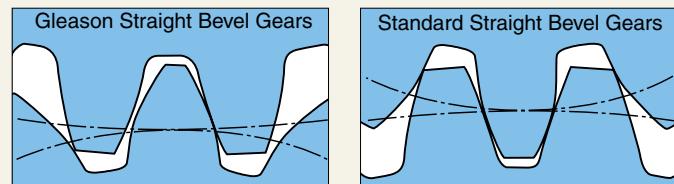

#### ■ Straight Miter (○ Allowable × Not allowable)

Catalog No.	SMA (B)(C)	MM	SM	SUM	PM	DM	LM	SAM
SMA(B)(C)	○	○	○	○	○	×	×	×
MM	○	○	○	○	○	×	×	×
SM	○	○	○	○	○	×	×	×
SUM	○	○	○	○	○	×	×	×
PM	○	○	○	○	○	×	×	×
DM	×	×	×	×	×	○	×	×
LM	×	×	×	×	×	×	○	×
SAM	×	×	×	×	×	×	×	○

② Miter gears are bevel gears with 1:1 gear ratio. Needless to say, they mate only with gears of the same module and number of teeth. Also, since KHK uses the Gleason system, our miter gears may not mesh with those made by another company or custom-made. It is best to order as a set.

#### Difference between Gleason Straight Bevel Gears and Standard Straight Bevel Gears

There are differences in the gear blank shapes between the two systems. In the table below, we illustrate the differences in various angles and dimensions for typical straight bevel pairs.

#### <Example>

Module  $m = 3$ , No. of teeth of pinion  $z_1 = 20$ ,  
Gear  $z_2 = 40$ , Face width  $b = 22$ , Pressure angle  $\alpha_0 = 20^\circ$

	Gleason straight bevel system		Standard straight bevel system	
	$z_1=20$	$z_2=40$	$z_1=20$	$z_2=40$
1 $d_0$	60	120	60	120
2 $\delta_0$	$26^\circ 34'$	$63^\circ 26'$	$26^\circ 34'$	$63^\circ 26'$
3 $R_0$	67.083		67.083	
*4 $h_k$	4.035	1.965	3.00	
*5 $h_f$	2.529	4.599	3.75	
*6 $\delta_k$	$30^\circ 29'$	$65^\circ 36'$	$29^\circ 08'$	$66^\circ 00'$
*7 $\delta_r$	$24^\circ 24'$	$59^\circ 31'$	$23^\circ 22'$	$60^\circ 14'$
*8 $d_k$	67.218	121.758	65.367	122.683
*9 X	58.197	28.242	58.658	27.317

**CAUTION:** In items 4 through 9 (marked with \*), dimensions and angles are different in two systems.

# Miter Gears

## 2. Caution in Selecting Gears Based on Gear Strength

The gear strength values shown in the product pages were computed by assuming a certain application environment. Therefore, they should be used as reference only. We recommend that each user computes their own values by applying the actual usage conditions. The table below contains the assumptions established for these products in order to compute gear strengths.

### Definition of bending strength

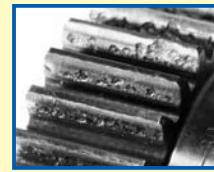

The allowable bending strength of a gear is defined as the allowable tangential force at the pitch circle based on the mutually allowable root stress of two meshing gears under load.

Example of the failure due to insufficient bending strength.

### Definition of surface durability

The surface durability of a gear is defined as the allowable tangential force at the pitch circle, which permits the force to be transmitted safely without incurring surface failure.

Example of the defacement due to insufficient surface durability.

## ■ Calculation of Bending Strength of Gears

Catalog No. Item	MMSG MMS MM	MMSA(B)	SMSG SMS SMA(B)(C)	SM SAM	SUM LM	PM	DM
Formula <small>NOTE 1</small>	Formula of bevel gears on bending strength (JGMA403-01)						The Lewis formula
No. of teeth of mating gears	Same number of teeth						—
Rotation	100min <sup>-1</sup> (600min <sup>-1</sup> for MMSG & SMSG)						100min <sup>-1</sup>
Durability	Over 10 <sup>7</sup> cycles						—
Impact from motor	Uniform load						Allowable bending stress
Impact from load	Uniform load						<small>NOTE 3</small> 1.15kgf/mm <sup>2</sup> (40°C with no lubricant)  m0.5 4.5 m0.8 4.0 m1.0 3.5 m1.5 1.8 kgf/mm <sup>2</sup>
Direction of load	Bidirectional						
Allowable bending stress at root $\sigma_{Flim}$ <small>NOTE 2</small>	31.33kgf/mm <sup>2</sup>	31.33kgf/mm <sup>2</sup>	14kgf/mm <sup>2</sup>	12.67kgf/mm <sup>2</sup>	7kgf/mm <sup>2</sup>		
Safety factor KR	1.2						

**NOTE 1:** The gear strength formula is based on JGMA (Japanese Gear Manufacturers Association) specifications, "MC Nylon Technical Data" by Nippon Polypenco Limited and "Duracon Gear Data" by Polyplastic Co. The units of number of rotations (min<sup>-1</sup>) and the stress (kgf/mm<sup>2</sup>) are adjusted to the units needed in the formula.

**NOTE 2:** Since the load is bidirectional, the allowable bending stress at root  $\sigma_{Flim}$ , used in JGMA 403-01 formula is set to 2/3 of the value.

**NOTE 3:** The values of the allowable bending stresses for DM m0.5 and m1.5 and the allowable root bending stress for LM gears are our own estimates.

## ■ Calculation of Surface Durability (Except those in common with bending strength)

Formula <small>NOTE 1</small>	Formula of bevel gears on bending strength (JGMA404-01)				
Kinematic viscosity of lubricant	100cSt (50°C )				
Gear support	Shafts & gear box have normal stiffness, and gears are supported on one end				
Allowable Hertz stress $\sigma_{Hlim}$	166kgf/mm <sup>2</sup>	166kgf/mm <sup>2</sup>	90kgf/mm <sup>2</sup>	49kgf/mm <sup>2</sup>	41.3kgf/mm <sup>2</sup>
Safety factor CR	1.15				

## 3. Caution with Regard to the Special Characteristics of Miter Gears

- ① MMSA(B) spiral miter gears are carburized throughout so that they do not permit any secondary operations. However, the back surface of B7 style gears is masked during the process so that it is possible to drill and pin on this surface.
- ② The keyway sizes of MMSA(B) finished bore spiral miter gears are made according to JIS B 1301, medium quality, but the final heat treating may cause some deformation.
- ③ The bore of SMS spiral miter gears may somewhat be deformed due to heat treatment and does not reach H7 tolerance.
- ④ Due to the characteristics of the material, PM plastic miter gears' product quality may be affected by heat or moisture absorption.
- ⑤ Items with black oxide finish are somewhat effective in resisting rust but are not totally rustproof.
- ⑥ SUM stainless steel miter gears use material which is especially resistant to rust but still is not 100% rustproof.
- ⑦ The bore tolerance of DM injection molded miter gears is generally -0.05 to -0.10, but may be plus values at the central portion of the hole. Remachining the bore is not recommended since reworking may expose voids in the plastic.

## 4. Other Points to Consider in the Selection Process

- ① There are various footnotes to the product pages under the headings of "CAUTION" and "NOTE". Please consider them carefully when selecting these products.
- ② There may be slight differences in color or shape of products shown in the photographs from the actual products.
- ③ KHK reserves the right to make changes in specifications and dimensions without notice.
- ④ KHK is ready to produce and supply custom order products. When you require specific gears different from KHK Stock Gears please contact our distributor for quotation. Also, please refer to page 16 "KHK Custom Order Products".

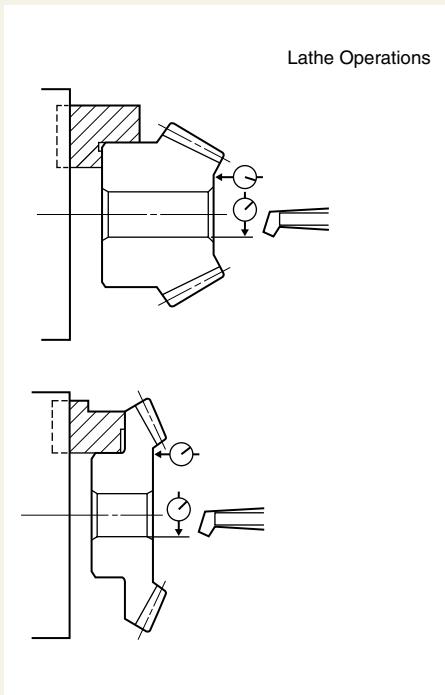

## Application Hints

In order to use KHK stock gears safely, carefully read the Application Hints before proceeding. If there are questions or you require clarifications, please contact our technical department or your nearest distributor.

KHK CO., LTD. TECHNICAL DEPARTMENT  
PHONE: 81-48-254-1744 FAX: 81-48-254-1765  
E-mail [export@khkgears.co.jp](mailto:export@khkgears.co.jp)

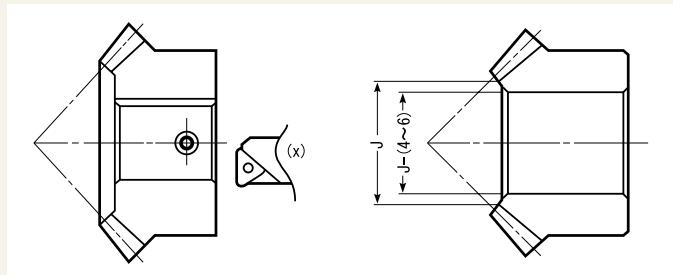

### 1. Caution on Performing Secondary Operations

- ① If you are reboring, it is important to pay special attention to locating the center in order to avoid runout.
- ② The reference datum for gear cutting is the bore. Therefore, it is best to use the bore for locating the center. If it is too difficult to do for small bores, the alternative is to use one spot on the bore and the runout of the side surface.
- ③ If reworking using scroll chucks, we recommend the use of new or rebored jaws for improved precision. Please exercise caution not to crush the teeth by applying too much pressure. Any scarring will cause noise during operation.

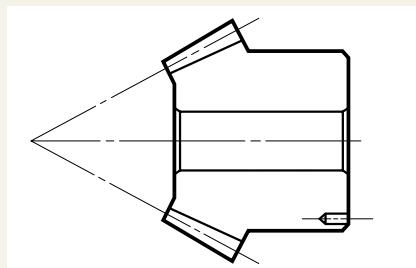

- ④ Starting in August 2003, the tooling holes on the hub face of the spiral miter gears (except ground gears) module 2.5 and above have been eliminated. However, we may have some items in stock with the hole.

- ⑤ MMSA(B) spiral miter gears are carburized throughout, so that no secondary operations can be performed (except B7 style items). For items with induction hardened teeth, such as SMSG and SMS series, the hardness is high near the tooth root. When machining the front face, the machined area should be 4 to 6mm smaller than the dimension, J.

- ⑥ For tapping and keyway operations, see the examples given in "1. Caution on Performing Secondary Operations" in KHK Stock Spur Gear section. When cutting keyways, to avoid stress concentration, always leave radii on corners.
- ⑦ PM plastic miter gears are susceptible to changes due to temperature and humidity. Dimensions may change between during and after remachining operations.
- ⑧ When heat treating S45C products, it is possible to get thermal stress cracks. It is best to subject them to penetrant inspection afterwards. While the teeth strength may increase four fold, the precision of the gear will drop approximately one grade.

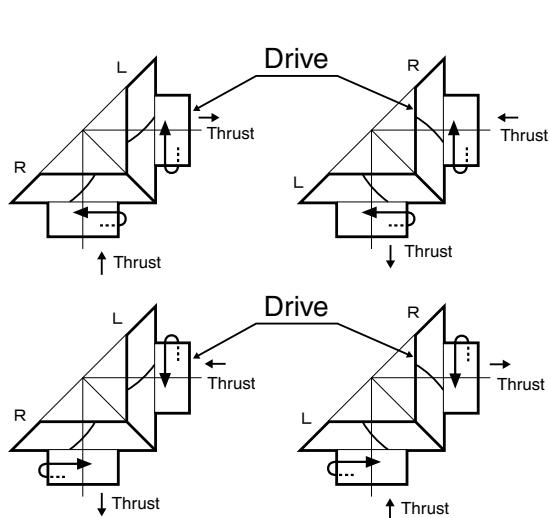

# Miter Gears

## 2. Points of Caution in Assembling

① Since miter gears are cone shaped, they produce axial thrust forces. Specifically with regard to spiral miter gears, the directions of thrust change with the hand of spiral and the direction of rotation. This is illustrated below. The bearings must be selected properly to be able to handle these thrust forces.

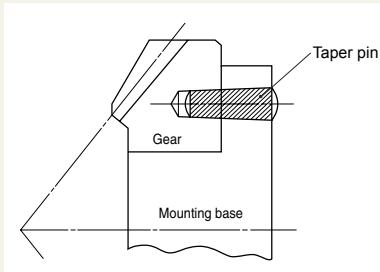

② KHK stock miter gears are designed such that, when assembled according to the specified mounting distance with a tolerance of H7~H8, the backlash shown in the table are obtained. Mounting distance error, offset error and shaft angle error must be minimized to avoid excessive noise and wear. Inaccurate assembly will lead to irregular noises and uneven wear. Various conditions of teeth contact are shown below.

③ If a miter gear is mounted on a shaft far from the bearings, the shaft may bend. We recommend mounting bevel gears as close to the bearings as possible. This is especially important since most miter gears are supported on one end. The bending of shafts will cause abnormal noise and wear, and may even cause fatigue failure of the shafts. Both shafts and bearings must be designed with sufficient strength.

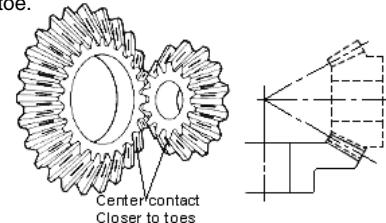

④ Due to the thrust load of miter gears, the gears, shafts and bearings have the tendency to loosen up during operation. Miter gears should be fastened to the shaft with keys and set screws, taper pins, step shafts, etc.

⑤ When installing MMSA(B) finished bore spiral miter gears in B7 style (ring type), always secure the gears onto the mounting base with taper pins to absorb the rotational loads. It is dangerous to secure with bolts only.

### Correct Tooth Contact

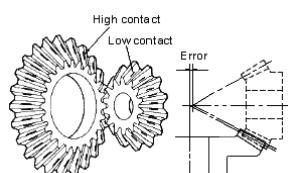

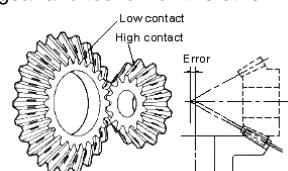

- When assembled correctly, the contact will occur on both gears in the middle of the flank and center of face width but somewhat closer to the toe.

### Incorrect Tooth Contact

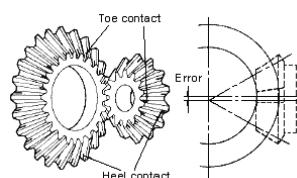

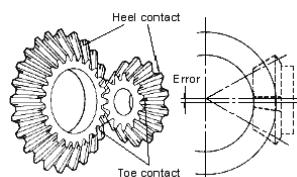

#### Mounting Distance Error

- When the mounting distance of the pinion is incorrect, the contact will occur too high on the flank on one gear and too low on the other.

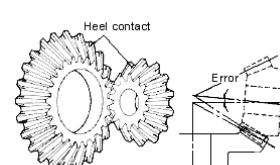

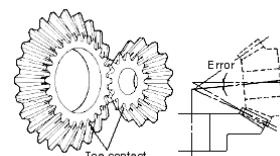

#### Offset Error

- When the pinion shaft is offset, the contact surface is near the toe of one gear and near the heel of the other.

#### Shaft Angle Error

- When there is an angular error of shafts, the gears will contact at the toes or heels depending on whether the angle is greater or less than 90°.

### 3. Notes on Starting Operations

- ① Before operating, check the following:
- Are the gears firmly mounted on the shafts?
  - Have you eliminated uneven tooth contact?
  - Does the gear mesh have a proper amount of backlash?  
(Please avoid the condition of no backlash)
  - Is there sufficient lubrication?
- ② If the gears are exposed, install a safety cover for protection.
- ③ Check the noise and vibration while the machine is in operation for any unusual conditions. If an abnormality is encountered, recheck the gears and assembly conditions. Also, check lubrication after start-up. Sometimes, when the unit is initially being operated, lubricating oil deteriorates rapidly.

### 4. Other Points to Consider in Applications

- ① KHK products are individually packaged to avoid damages. Depending on how they are handled, it is still possible to deform or break them. It is important to exercise care in handling these parts.
- ② Check the products as they are being taken out of the boxes. If any of them are rusted, scratched or dented, please return to the dealer where they were bought, for exchange.
- ③ KHK cannot guarantee the precision of gears once the customer performs a secondary operation on them.

## PRODUCT IMPROVEMENT ANNOUNCEMENT

In order to increase the gear strength of KHK standard Miter Gears, starting in June 2004, the following changes have been introduced. During this transition, some of the specifications will change.

### 1. Applicable Series

- ① MMSG Ground Spiral Miter Gears –(30 Items)
- ② MMS Spiral Miter Gears – (20 Items)
- ③ MM Miter Gears – (10 Items)

### 2. Improvement Details

Increase in gear strength (Approximately 15% higher bending strength compared to previous one)

### 3. Change in the specifications

	Before	After
Heat treatment	Teeth induction hardened after carburizing	Carburizing (bore & hub portion masked)
Surface Treatment	Black oxide	No black Oxide

The corner tips of the gear-teeth of KHK stock Miter Gears are machine chamfered for safety and for prevention of damages.

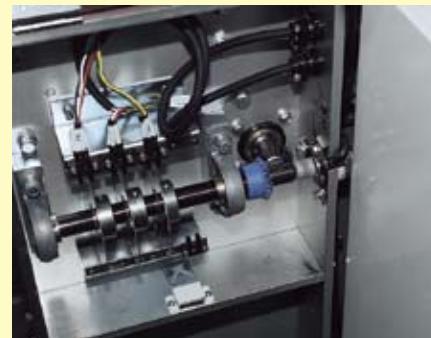

■ The chamfering of the corner gear tips for miter gear (unit: mm)

Module	Outside edge R	Inside edge R
0.5 up to 1	0.5	all burrs removed
1 up to 2.5	1	0.5
2.5 up to 5	2	1
over 5	3	1.5

### Example of KHK Gear Applications

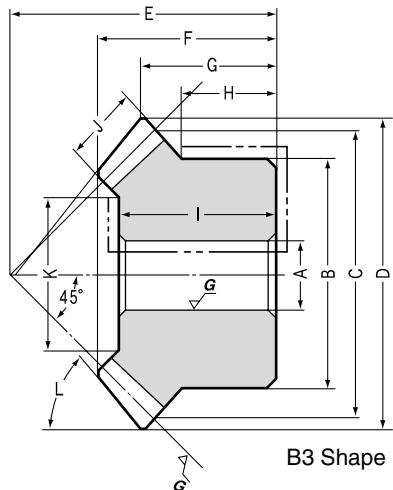

Automatic packaging machine (Spur gears)  
(Miter gears - inset)

Electric components assembly line  
(Miter gears <SM and PM>)

CAUTION: A set of miter gears must be identical in module and number of teeth, but opposite in spiral hands.

CAUTION: Dimensions of the outside diameter, the overall length and crown to back length are all theoretical values, and some differences will occur due to the corner chamfering of the gear tips.

## Ground Spiral Miter Gears

### Specifications

Precision grade	JIS B 1704 grade 2	Tooth hardness	48~53HRC
Gear teeth	Gleason	Surface treatment	Black oxide except Ground surface
Pressure angle	20°	Tooth surface finish	Ground
Helix angle	35°	Datum reference surface for gear grinding	Bore
Material	S45C	Secondary Operations	Possible except tooth areas
Heat treatment	Teeth induction hardened		

Holding surface dia.	Tip angle	Shape	Allowable torque (N·m) NOTE 1		Allowable torque (kgf·m)		Backlash (mm)	Weight (kgf)	Catalog No.

**CAUTION:** These products which are hardened by carburizing allow no secondary machining. However, the back surface of B7 type gears is masked during the process so that it is possible to drill and pin on this surface.

**CAUTION:** Dimensions of the diameter, the overall length and crown to back length are all theoretical values, and some differences will occur due to the corner chamfering of the gear tips.

## Finished Bore Spiral Miter Gears

Precision grade	JIS B 1704 grade 4	Tooth hardness	55~60HRC
Gear teeth	Gleason	Surface treatment	—
Pressure angle	20°	Tooth surface finish	Cut
Helix angle	35°	Datum reference surface for gear cutting	Bore
Material	SCM415	Secondary Operations	Not Possible (Except the mounting surface on B7 shape)
Heat treatment	Overall Carburizing NOTE4		

**NOTE 4:** It is possible to perform secondary operations on the mounting surface of style B7 due to masking during carburizing.

CAUTION: SMA and SMB gears are identical in all features except for bore and keyway dimensions.

CAUTION: Dimensions of the outside diameter, the overall length and crown to back length are all theoretical values, and some differences will occur due to the corner chamfering of the gear tips.

## Specifications

Precision grade	JIS B 1704 grade 4	Tooth hardness	48~53HRC

**CAUTION:** Although the sintering process allows for the inclusion of oil to maintain lubricity, these gears have not been oil impregnated.

**CAUTION:** The rust prevention process involves treating the gears with steam (in effect, creating the surface oxidation). The black oxide treatment cannot be applied to these gears.

## Carburized & Hardened Miter Gears

### Specifications

Precision grade	JIS B 1704 grade 4	Tooth hardness	55~60HRC
Gear teeth	Gleason	Surface treatment	—
Pressure angle	20°	Tooth surface finish	Cut
Material	SCM415	Datum reference surface for gear cutting	Bore
Heat treatment	Carburizing <small>NOTE 1</small>	Secondary Operations	Possible where masking for carburizing

**NOTE 1:** The areas marked with ---- on the diagram are masked during the carburizing and can be modified, even though the hardness is somewhat higher.

### ■ Regarding Angular Miter Gears

The shafts of standard miter gears are at 90°. Miter gears with other angles are called angular miter gears. SAM series of KHK standard angular miter gears are available with 45°, 60° and 120° shaft angles. Other shaft angles may be ordered as custom gears. However, because of the limitations of manufacturing equipment, some gears are not possible to be made.

**CAUTION:** Dimensions of the outside diameter, the overall length and crown to back length are all theoretical values, and some differences will occur due to the corner chamfering of the gear tips.

**NOTE 1:** Significant variation in temperature or humidity can cause dimensional changes in plastic gears (MC Nylon gears). Please see the technical section on the characteristics of plastic gears (page 32).

## Specifications

Precision grade	JIS B 1704 grade 4	Tooth hardness	115~120HRR
Gear teeth	Gleason	Surface treatment	—
Pressure angle	20°	Tooth surface finish	Cut

**NOTE 2:** The allowable torques shown in the table are the calculated values using the Lewis formula.

# DM Injection Molded Miter Gears Modules 0.5~1.5

■ Dimensional tolerance table (unit: mm)

Range	Tolerance
Below 3mm	$\pm 0.2$
3 up to 6 mm	$\pm 0.25$
6 up to 10 mm	$\pm 0.3$
10 up to 18 mm	$\pm 0.35$
18 up to 30 mm	$\pm 0.4$
30 mm up	$\pm 0.5$

## Specifications

Precision grade	JIS B 1704 grade 8
Gear teeth	Gleason
Pressure angle	20°
Material	Duracon(M90-44)
Heat treatment	—
Tooth hardness	110~120HRR
Surface treatment	—
Tooth surface finish	Injection molded
Datum reference surface for tooth forming	Bore
Secondary Operations	Not recommended

## ■ 20 Tooth Miter Gears Modules 0.5~1.5

Catalog No.	Module <i>m</i>	No. of teeth <i>z</i>	Bore NOTE 1	Hub dia. <i>A</i>	Pitch dia. <i>B</i>	Outside dia. <i>C</i>	Mounting distance <i>D</i>	Total length <i>E</i>	Crown to back length <i>F</i>	Hub width <i>G</i>	Length of bore <i>H</i>	Face width <i>I</i>	Holding surface dia. <i>J</i>	Tip angle <i>L</i>
<b>DM0.5-20</b>	0.5	20	3	8	10	10.71	11	7.97	6.35	4	7	2.5	4.93	49°48'
<b>DM0.8-20</b>	0.8	20	5	12	16	17.13	16	10.83	8.56	5	10	3.5	10.1	49°48'
<b>DM1 -20</b>	1	20	6	16	20	21.41	21	14.62	11.71	7	13	4.5	11.27	49°48'
<b>DM1.5-20</b>	1.5	20	8	20	30	32.12	30	20.59	16.06	10	19	7	18.2	49°48'

NOTE 1: The bore tolerance is generally  $-0.05$  to  $-0.1$  but may be  $+ \text{ value}$  at the central portion of the hole. Re-machining the bore is not recommended since reworking material may expose voids.

Pitch Angle 45°

## BB Sintered Metal Bushings

The table shows a series of standard metal bushings that can be pressed into standard injection molded gears. They can be used as bearing metal on idler gears or to reduce the bore of the gears.

(unit: mm)

Catalog No.	I.D. of bushing $d_0^{+0.02}$	O.D. of bushing $D_0^{+0.02}_{-0.01}$	Length $L_0^{+0}_{-0.3}$	Products that can use the bushing
